

evoFLOOR X

**underfloor
heating controller**

NEW!

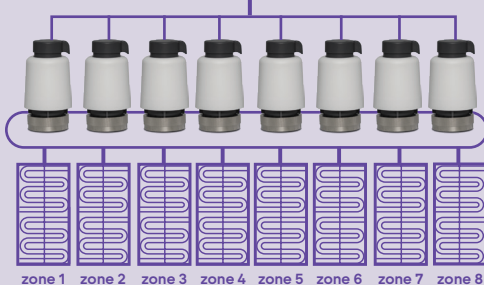

evoNET Cloud
internet system and application

xTHERM 60U
room temperature
controller

evoFLOOR X
underfloor
heating controller

...for up to 8 heating zones

Why choose the evoFLOOR X controller?

universal controller dedicated to
development projects

low device cost thanks to optimized
design

easy connection without risk of
incorrect configuration

ergonomic housing for easy and
quick installation

minimalist design

combined with xTHERM 60U:

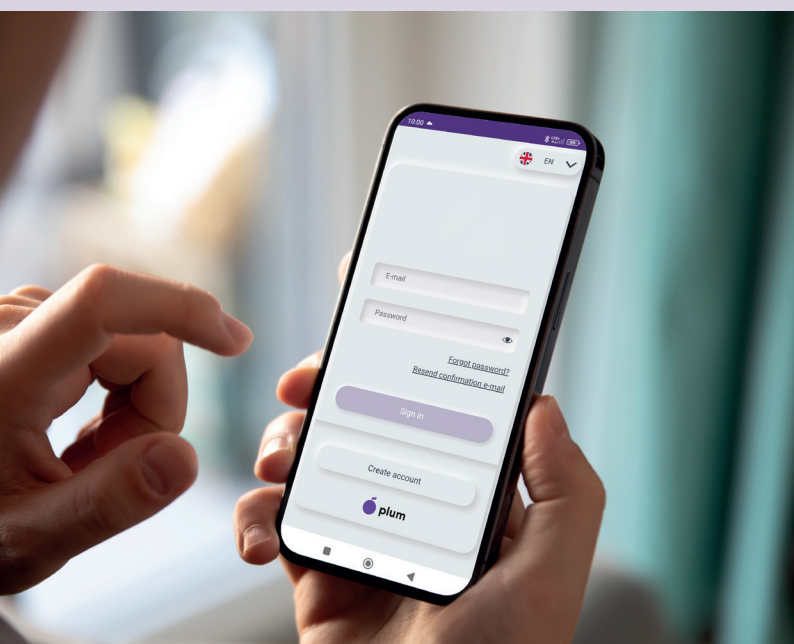

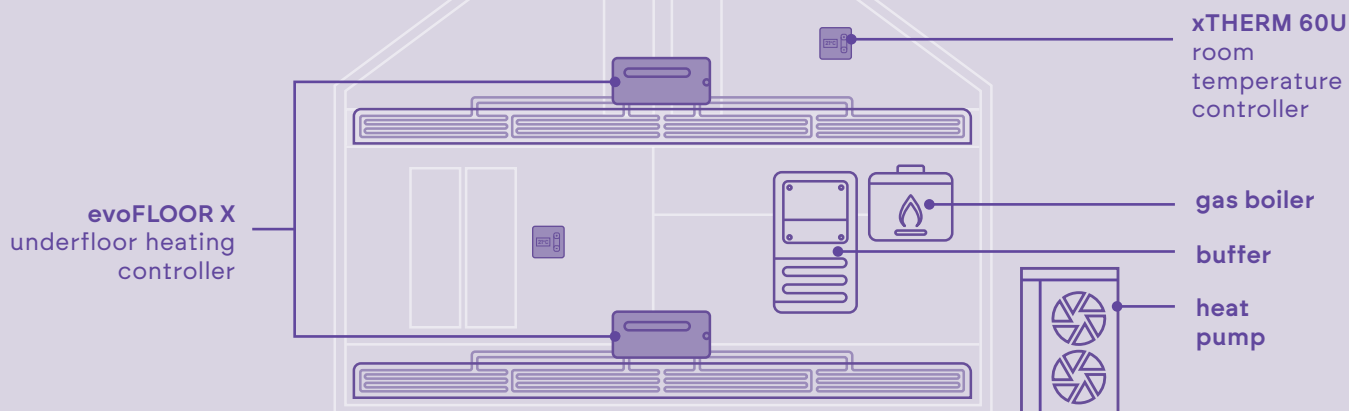

remote access and service for
underfloor heating installation

comfort and energy efficiency – in every zone

optimal cooperation with heat pumps or boilers – full control of the operating cycle

Whether you choose a system with a heat pump and buffer or heating with a gas boiler, the evoFLOOR X controller will perform perfectly in your installation.

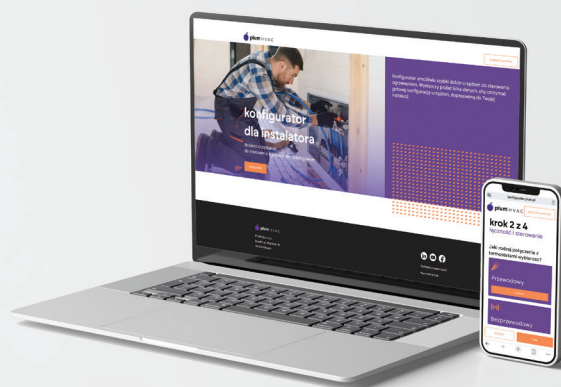

remote configuration and management of room temperature controllers

evoNET Cloud is a mobile application for controlling and configuring room temperature controllers and the evoFLOOR X controller via wireless BT connection.

The evoNET Cloud app works offline and extends the functionality of xTHERM series room temperature controllers.

Choose devices for underfloor heating control!
